🌐 <https://github.com/Gabo2204/Gabo2204>

Aspiring Computer Systems Engineer driven by discipline and integrity. Throughout my training, I have developed strong competencies in software engineering, database architecture, and notable expertise in the design of convolutional neural networks. My path of combining the professional world with academics forged in me a strong capacity for organization, resilience, and a practical approach to transforming technological theory into tangible results.

EXPERIENCE

Web Development Lead at **CONSECAL S.A. de C.V. (March 2024 - May 2026)**

- Designed and implemented the company's new website, achieving a 45% increase in monthly visits.
- Developed a results-query system that streamlined internal processes, reducing customer service time by 20%.
- *Technologies: PHP, HTML, CSS, JavaScript, MySQL, and cPanel*

Database Administrator at **Poli Asesor (January 2021 - June 2022)**

- Led the development of an online tutoring system, benefiting more than 500 students.
- Administered the system's database, prioritizing security and performance.
- *Technologies: Java, Python, HTML, CSS, JavaScript, MySQL, Microsoft Azure, and AWS*

EDUCATION

Computer Systems Engineering.

- Escuela Superior de Cómputo (ESCOM) — (2022 - 2026).

Programming Technician.

- Centro de Estudios Científicos y Tecnológicos No. 9 (CECyT 9) — (2019 - 2022).

SKILLS

- **Languages and Development:** Python, Java, PHP, JavaScript, Node.js, HTML, CSS.
- **Artificial Intelligence and Data:** Convolutional neural networks (CNN), classification algorithms (ID3, CART).
- **Databases:** Advanced SQL (MySQL, SQL Server, PostgreSQL).
- **Hardware and Systems:** Raspberry Pi integration, IoT automation.
- **Work Methodologies:** Agile (Scrum, XP) and Traditional (Waterfall, Spiral).

PROJECTS

SysLocker: Smart Lockers System (2026)

- Developed the hardware and software architecture and integration using Raspberry Pi for the automated control of relays via GPIO pins.
- *Technologies: Python, Raspberry Pi, Bash/Shell, GPIO.*

Morbus Vita: Predictive Health System (2021)

- Designed and optimized the back-end of an interactive web application that calculates the probability of suffering from chronic diseases based on the analysis of the user's habits.
- *Technologies: Python, Java, HTML, CSS, JavaScript, ID3.*

LANGUAGES

- **Spanish:** Native
- **English:** C1 Level

CERTIFICATIONS

- Huawei HCCDA - Tech Essentials
